

A woman with short, curly brown hair, wearing a blue button-down shirt and a lanyard with a badge, is looking at a rack of clothes in a store. The background shows more clothing racks and large windows.

CUSTOMER SHOPPING BEHAVIOR

Where growth is hiding

A decision-oriented read on subscriptions, loyalty, discounts, products, and targeted marketing. The aim is to turn observed behavior into focused tests, not broad assumptions.

THE BASE

A large, loyal customer base is already in motion

3,900

purchases analyzed

\$59.76

average purchase

3.75

average review rating

3,116 loyal · 701 returning · 83 new

customer segments

The base is already active and loyal, so the growth question is how to deepen behavior and move more customers into higher-value routines.

REVENUE MIX

Male customers generate more revenue, but the gap is a targeting signal

Male customers contribute more than twice the recorded revenue of female customers. The gap is a signal to investigate, not a reason to assume one audience is inherently more valuable. Use it to test audience mix, product assortment, and campaign reach before reallocating spend.

Subscriptions have room to grow without changing average spend

Subscription status

AVERAGE SPEND

\$59.49

Subscribers

\$59.87

Non-subscribers

1,053 subscribers

2,847 non-subscribers

The opportunity is conversion and retention, not simply attracting higher-value shoppers. Start with the 2,847 non-subscribers, then measure whether an exclusive benefit improves conversion without changing the current spend profile.

OFFER ECONOMICS

Discounts attract valuable shoppers, not only bargain hunters

839 customers used discounts and still spent above the average purchase amount. That makes discounting a possible lever for participation and basket building, not just a cost to minimize.

Product	Discount rate
Hat	50.00%
Sneakers	49.66%
Coat	49.07%
Sweater	48.17%
Pants	47.37%

Protect margin with targeted offers and threshold-based incentives instead of broad discounting. Prioritize the products and customer moments where the offer can unlock incremental value, then compare revenue and margin together.

QUALITY SIGNAL

Top-rated products point to a quality-led campaign story

Pair the highest-rated products with loyalty and subscription messaging. The tight rating cluster supports a quality-led story across several products rather than a single-product bet.

The leading products cluster tightly above the overall average rating. Use the cluster to build a credible campaign set, then let testing determine which product and message combination earns the strongest response.

Young adults lead revenue, while every age group contributes meaningfully

Build a lead segment around young adults, then tailor creative and offers for the other groups rather than ignoring them. The spread is meaningful but not exclusive: use young adults as the lead audience while keeping the other groups in the learning plan.

Three decisions can turn the analysis into action

01

Grow subscriptions

Test exclusive benefits and conversion offers for the 2,847 non-subscribers. Compare conversion and repeat purchase against a clear holdout.

02

Reward repeat behavior

Move returning customers toward the 3,116-person loyal segment. Use milestones to make the next repeat action visible and measurable.

03

Improve offer economics

Target discounts around products and shoppers where incremental value is clearest. Read revenue and margin together before scaling an offer.

Launch a focused test plan

Subscription test: one exclusive benefit, measured on conversion and repeat purchase. Keep the offer simple enough to isolate the effect.

Loyalty test: reward milestones for returning customers. Track whether the reward changes the next purchase, not only enrollment.

Merchandising test: feature top-rated products with controlled offers. Compare product-led creative with the existing presentation.

Measurement: track revenue, margin, subscription conversion, repeat purchase, and review rating. Use the same measures across tests so the next decision is comparable.
